CURRENT RESEARCH

Our group is actively involved in the fabrication of different types of chemical sensors, specifically electrochemical and optical sensors. Electrochemical sensors include potentiometric sensors, incorporating different types of ionophores – calixarenes, porphyrins, crown ethers, schiff bases, ion association complex etc are used for the determination of metal ions and drugs as well as voltammetric sensors for the analysis of drugs, food additives and biological molecules by modification of electrode surface using metalloporphyrins, conducting polymers, nanomaterials and self assembled monolayers. Currently the main focus of the group is on the development of fluorescence sensors and colorimetric sensors based on quantum dots, nanomaterials etc. for environmental, food and clinical monitoring. The group is also working in the field of immunosensors and biosensors.

CITY RE

DEVICE TO MEASURE DOPAMINE LEVEL

People always like to measure their happiness because happiness is decided by the dopamine level. Measurability of the same will help neuroscientists, psychologists, and psychiatrists to deal with neurological disorders such as depression, schizophrenia, Parkinson's, and Alzheimer's. This breakthrough invention was done by Dr Shalini Menon, CSIR Research Associate at Department of Applied Chemistry of Cochin University of Science and Technology (CUSAT) under the mentorship of Dr K Girish Kumar, dean of science faculty. The prototype of a sensor device, The DOPAMETER, was done in collaboration with PROCHIP TECHNOLOGIES, a start-up from Kozhikode. A patent application has already been filed on this investigation. Shalini is the founder of ChemSensorRR - a start-up incubated at CITTIC, CUSAT, and has been set up as a manufacturing enterprise under the KSME 2020. The sensor group of CUSAT is working on a number of sensor devices.

■ CUSAT conducts a talent hunt for the country's future scientists

Back to the basics

KOCHI, FEB. 22

It was a day to cherish for a group of bright eighth standard students from across the State when they got an opportunity to do scientific experiments and fire away questions to an IAS officer.

"We were on a journey to an entirely different world that begins with atoms and extends all the way up to the Antarctica Sea. The session with Swagath Bhandari IAS, Assistant Collector, Ernakulam, was really motivational. It was an eye-opener when she told us how she chose her career and overcame the hurdles," said Atul Raj, student of HSS Srikrishnapuram, Palakkad.

He was among the 60 students selected for 'Inculcate 2012' held at CUSAT campus in Kochi after a state-wide competitive exam held by the Kerala State Science and Technology Museum (KSSTM).

The idea was to spot talent in basic sciences early and mould them by offering scholarships at school-level.

"Nowadays, only a few among the bright students opt for courses other than medicine or engineering. So the programme is an attempt to attract talented students to basic sciences," Dr Girish Kumar K, Professor, Department of Applied Chemistry, CUSAT, said.

A total of 20,000 students sat for the exam that tested their knowledge in basic sciences and 300 of them came out trumps.

"They were divided into five groups of 60 before they attended the talent pruning camps at five universities including CUSAT. Each university will select 60 students and provide them a monthly stipend of ₹750 till they pass the 12th standard exam. Mentors will be allotted to them to help

Students during the training in basic science as part of the Inculcate 2012 programme in CUSAT, Kochi. Sixty students from across the state took part in the programme.

them excel in their chosen field," Kumar said.

Swagath Bhandari termed the interaction "vibrant" and observed that the kids were really curious about the happenings around them.

"I asked them to choose a career according to their capability and aptitude and cultivate the habit of reading," she told *Deccan Chronicle*.

"One student asked me why I chose civil service to which I replied that my idea was to serve the poor. He then said there were so many other ways to serve the poor," she

said, smiling.

The children virtually had a peep into the polar region, thanks to the lecture by Dr A.A. Mohammed Hatha, Associate Professor, Department of Marine Biology, CUSAT.

The students had the rare opportunity to familiarise themselves with the life and culture of the Arctic region.

The students also had the opportunity to do experiments in chemistry, physics, mathematics and biotechnology laboratories and understand the principles behind

them.

A quiz programme on basic sciences was another session that they enjoyed.

"I was really thrilled to know about distinct bacteria and virus in biotechnology, working of simple pendulum in physics, fun problems in mathematics. I had the shock of my life when I learned about the adulterants that can get into our body and was amazed to see artificial sun setting in the chemistry lab," said Aiswarya M.V., an eight standard student from Kozhikode.

Biosensors for quality control

Biosensors are fast becoming an important tool in research and commercial applications as they can identify specific targets in the human body and environment

simply science

have caught the interest of the industry because of their remarkable ability in detection, experimental simplicity and low cost. The Department of Applied Chemistry at Cusat has been working on electrochemical sensors to detect metal ions and drugs in the human body.

Working on research projects funded by the Defence Research and Development Organisation (DRDO), the team has made biosensors to detect metal ions and drug residues. "Clinical trials will be done later by the funding agency. We have handed over the technology to the DRDO," said K Girish Kumar, professor and head, Department of Applied Chemistry, Cusat.

"When we finished 'Fabrication of potentiometric sensors for the determination of metal ions' for DRDO, we got the next project, 'Development of electrochemical sensors for the determination of pharmaceuticals', which has been completed," he said. The team had an international collaboration with the Polish Academy of Sciences, a bilateral research programme of Department of Science and Technology (DST). Girish says that the electrochemical sensors group plans to take up active research on enzyme immobilised biosensors and develop new Voltametric sensors for checking the quality of food in the market. "Our ultimate aim is to develop disposable sensors," he said.

WITH most people becoming conscious and aware of the quality of food, water and medicine, biosensors have started to play an important role in our lives. They are fast becoming an important tool in research and commercial applications as they can identify specific targets in the human body and environment.

Glucose monitoring is familiar to most of us. Researchers are now working on remote sensing of air-

borne bacteria in bio-welfare, detection of pathogens, determining levels of toxic substances before and after bioremediation, routine blood urine analysis, drug residues in food and the human body.

While human senses provide essential information about our close environment, researchers are looking for new sensors that will give us an analysis of the food we eat, the water we drink and the air we breathe. This requires novel chemical sensors, molecular recognition and signal transduction.

മരുന്നിലെയും ഭക്ഷണത്തിലെയും പദാർത്ഥങ്ങളുടെ അളവ് കണ്ടുപിടിക്കാൻ പുതിയ സെൻസറുകൾ

എൻ.പി. ഹരിദാസ്

കളമേഴ്സി: മരുന്ന്, ഭക്ഷണം, ശീതള പാനീയങ്ങൾ എന്നിവയിലടങ്ങിയിരിക്കുന്ന വിവിധ പദാർത്ഥങ്ങളുടെ അളവ് കണ്ടെത്തുന്നതിനുള്ള സെൻസറുകളുമായി കൊച്ചി സർവകലാശാല. ശീതള പാനീയത്തിലെ രാസമാലിന്യത്തിന്റെ അളവ് മുതൽ ശരീരം ആഗിരണം ചെയ്യുന്ന മരുന്നിന്റെ അളവ് വരെ കണ്ടെത്താൻ ഇതുവഴി കഴിയും.

ഒരു പദാർത്ഥം എത്ര അളവുണ്ട് കണ്ടുപിടിക്കാനുള്ള രാസപരമായ രീതിയാണ് കെമിക്കൽ സെൻസറിലൂടെ ചെയ്യുന്നത്. കെമിക്കൽ സെൻസറുകളിൽ തന്നെ ഇലക്ട്രോ കെമിക്കൽ സെൻസറുകളിലാണ് കൊച്ചി സർവകലാശാല പ്രധാനം കൊടുത്തിരിക്കുന്നത്. കൊച്ചി ശാസ്ത്ര സാങ്കേതിക സർവ

കലാശാല (ക്യൂസാറ്റ്) യിലെ അഡ്വൈസ് കെമിസ്ട്രി പ്രൊഫസർ ഡോ. കെ. ഗിരീഷ് കൃമാറിന്റെ നേതൃത്വത്തിൽ 15 പേരുള്ള സംഘമാണ് സെൻസറുകൾ വികസിപ്പിച്ചെടുത്തത്.

കേന്ദ്ര സർക്കാറിന്റെ ഡിഫൻസ് റിസർച്ച് ഓർഗനൈസേഷൻ കേരള സ്റ്റേറ്റ് കമ്മിറ്റി ഓൺ സയൻസ് ടെക്നോളജി ആൻഡ് എൻവയറോൺമെന്റ് എന്നിവയുടെ സാമ്പത്തിക സഹായത്തോടെയാണ് സെൻസറുകൾ വികസിപ്പിച്ചെടുത്തത്.

ലോഹങ്ങളുടെയും ഹാർമസ്സൂട്ടിക്കലുകളുടെയും മറ്റും അളവ് നിർണയിക്കാനുള്ള 60-ഓളം സെൻസറുകളാണ് വികസിപ്പിച്ചെടുത്തിട്ടുള്ളത്.

മരുന്ന് കഴിച്ച ഒരു രോഗിയുടെ മൂത്രം പരിശോധിച്ചാൽ ശരീരം ആഗിരണം ചെയ്യാതെ പുറത്തുള്ള മരുന്നിന്റെ

അളവ് ഇത്തരം സെൻസർ ഉപയോഗിച്ച് കണ്ടെത്താനാവും. ഇതുവഴി ശരീരത്തിൽ എത്ര മരുന്ന് ആഗിരണം ചെയ്തിട്ടുണ്ടെന്ന് അറിയാനാകും.

നിലവിലുള്ള സംവിധാനങ്ങൾ ഉപയോഗിച്ച് വിവിധ പദാർത്ഥങ്ങളുടെ അളവ് കണ്ടെത്തുന്നതിനേക്കാൾ വളരെ കുറഞ്ഞ ചെലവിൽ സെൻസറുകൾ ഉപയോഗിച്ച് ഇവ കണ്ടെത്താനാകും.

ഏകദേശം ഒരു കണ്ടെത്തലിന് 5000 രൂപയേ ചെലവാകുകയുള്ളൂവെന്ന് ഡോ. ഗിരീഷ് കൃമാർ പറഞ്ഞു.

നിലവിൽ ലോഹങ്ങളുടെ അളവ് കണ്ടെത്തുന്നതിന് ആറ്റമിക് അബ്സോർബ്ഷൻ സ്പെക്ട്രോമീറ്റർ പോലുള്ള ഉപകരണങ്ങൾ ഉപയോഗിച്ചാണ്. ഈ ഉപകരണത്തിന് മാത്രം 20 ലക്ഷത്തോളം വിലയുണ്ട്. ഇതുപയോഗിച്ചുള്ള പരിശോധനയ്ക്ക് വേറെയും ചെലവുകൾ വരും.

പരിശീലനം ലഭിച്ച ആളുകൾക്ക് ലാബിൽ തന്നെ ഉണ്ടാക്കിയെടുക്കാൻ പറ്റുന്നതാണ് ഈ സെൻസറുകൾ.

ചോദ്യത്തിൽ എത്രമാത്രം നികൽ ഉണ്ടെന്ന് കണ്ടുപിടിക്കാനുള്ള നികൽ സെൻസർ, വെള്ളത്തിലെ ഘന ലോഹങ്ങളെ കണ്ടുപിടിക്കുന്നതിനുള്ള സെൻസറുകൾ തുടങ്ങിയവയും ഉണ്ട്.

ഹാർമസ്സൂട്ടിക്കൽ അനാലിസിസിന് രാമിയിൽ വ്യാപകമായി ഉപയോഗിക്കാവുന്ന വിവിധ സെൻസറുകൾ വികസിപ്പിച്ചെടുത്തവയിൽ പെടും. മരുന്നുകളുടെ ഗുണനിലവാര പരിശോധനയ്ക്ക് രാമിയിൽ ഇത്തരം സെൻസറുകൾ ഉപയോഗിക്കാം.

പലതരത്തിലുള്ള ആൻറി ബയോട്ടിക്കുകൾ, വേനേസഹാരികൾ തുടങ്ങിയവയ്ക്കുള്ള സെൻസറുകളും വികസിപ്പിച്ചെടുത്തവയിലുണ്ട്.
